

EnviR

The SmartR Monitor

Building on the ENVI's individual appliance monitoring capabilities the EnviR also empowers users with full utility metering ability. Imagine how much can be saved by monitoring gas, water and electricity usage.

- All the features of the ENVI with the following added features.
- An alternative to an AMR solution that enables users to provide multi-utility accurate readings.
- Removes the need to receive estimated invoice billing with our optical meter reader.
- Post live energy data online using the Current Cost Internet connection device. (The Bridge)
- Track, analyse and compare household energy consumption using the Current Cost web portal.
- Check your energy usage whilst you're away from home. Applications have been created for mobile technology: enabling remote access and control of your home information.
- Programmable tariffs to display realistic costs.
- Identify and monitor those energy hungry appliances (IAM plug required)
- C² communication technology provides interoperability with the existing and future Current Cost product range.

Monitor Details

Colours available: White or Black with a selection of coloured Fascias available

Channels: 10 (Beta)
